PROFILE

Which brand should we call next, which fans will buy the deluxe edition, and where should we open the next venue? Data analyst and live music fan with experience in partnerships and commercial analytics across Dublin, New York and London, answering those questions with machine learning, audience data and tools that non-technical teams trust. A brand targeting model built into a Formula One team's CRM and refreshed weekly, a fan intelligence platform built on five streaming and social platforms, and an expansion analysis for a live music promoter.

WORK EXPERIENCE

Williams Racing (Formula One), *London, UK* May 2026 - Sep 2026
Data Analyst, Commercial Insights and Strategy (MSc industry project)

- Built a brand partnership targeting system for Williams' commercial team, whose target was new partners at £5m+ a year: researched and prioritised every Salesforce account weekly from ZoomInfo, LinkedIn Sales Navigator, Crunchbase and company financials so relationship time went to the brands most likely to sign.
- Analysed engagement across 926 partnership opportunities (emails, meetings, hospitality, deal origin, agency partners) to find which behaviours convert: renewals and warm agency introductions roughly doubled monthly closure rates; presented findings to senior commercial stakeholders.
- Deployed AI (Claude via the Batch API) to read 60 million rows of global news for signals such as mergers, expansion and leadership change, giving every brand an evidence card so the first conversation was about their priorities, not ours.
- Trained the model on 340,000+ historical sponsorship deals and validated it with sales reps in regular reviews; weekly target lists identified future partners at 8× previous campaign rates, and one recommended brand later approached Williams directly.
- Worked alongside the team's agency partners, implemented the system in Salesforce, walked the sales team through each version and handed over a production system they now plan their week around.

Northwell Health / Northwell Holdings, *New York, USA* Oct 2024 - Sep 2025
Executive Fellow (business development, ventures and global partnerships)

- Managed a global partnership for an Irish health-tech start-up entering the US market as its day-to-day contact, coordinating its first clinical trial with Enterprise Ireland and trade boards and owning requirements, timelines and sign-off.
- Drove business development towards revenue targets needed to keep a non-profit health system at break-even after US insurance legislation cut core funding: analysed which services to expand and built the business cases for growth.
- Served as chief of staff to two executives leading a $32M expansion, delivering the weekly KPI dashboards behind their decisions; assessed companies for Northwell Holdings' ventures arm on potential to return a profit.

Arup, *Dublin, Ireland* Aug 2023 - Sep 2024
Strategy and Insights Consultant

- Led stakeholder workshops and tender evaluations for €2M+ zero-emission transport programmes as day-to-day contact for government clients, translating policy priorities into business cases and delivery plans.
- Forecast EV charging demand across Ireland to recommend infrastructure sites for government clients.

EDUCATION

University College London, *London, UK* Sep 2025 - Sep 2026
MSc Business Analytics

Trinity College Dublin, *Dublin, Ireland* Sep 2019 - Aug 2023
BSc Engineering (2:1, Upper Second Class Honours)

SKILLS

Brand partnerships: partner research and prioritisation, sponsorship pipeline management in Salesforce, agency and partner relationships, renewals and partnership growth, revenue targets, pitching and presenting to executives, day-to-day partner contact
Fan and audience insight: streaming, playlist and social data (Spotify, YouTube, Reddit, Last.fm), fan segmentation, sentiment analysis, campaign targeting briefs, market and expansion analysis, KPI dashboards
Tools: Salesforce, ZoomInfo, LinkedIn Sales Navigator, Crunchbase, Excel, PowerPoint, Python, SQL, predictive models, AI tools

SELECTED PROJECTS (case studies and live demos: **kellyc86.github.io/caroline-kelly-portfolio**)

- **Fan intelligence platform for a label brief:** Grouped 4,800+ fans of five artists into four behavioural archetypes from public social and streaming data, with sentiment scoring, so a label can plan and price for each artist's community.
- **Market expansion analysis for a live-music promoter:** Assessed 21 UK cities on venue density, student population and market gap to recommend where to open next.
